

## VEEAM SOFTWARE

GRAY PUKSAND DELIVER A NEW SYDNEY HEADQUARTERS FOR VEEAM SOFTWARE.

As technology becomes more sophisticated and allows for remote access via digital cyberspace, we still need a physical workspace - preferably in a great part of town. Veeam Software came to this conclusion as their growing data backup and recovery company began to burst at the seams at their previous headquarters in Manly. With the decision made to move into the bustling Sydney CBD, they were keen to understand current workspace trends and incorporate these into their new office.

A series of intensive briefing workshops with staff at all levels of the company teased out the overall aim of the project. The result is a fresh, welcoming and efficient workspace design that aids and supports their day-to-day business operations in an environment that encourages creativity and collaboration amongst staff.

The design meets these aesthetic requirements and incorporates Veeam Software's sophisticated IT infrastructure which is an essential component of their business. The main challenge with this fitout was the need to deliver a seamless IT and AV network that catered to the business demands within the budget constraints. To do this the 'must-have' IT requirements were all installed as well as provisions for future 'wish-list' AV and IT equipment.

Gray Puksand's designers were in constant communication with Veeam and the builders to ensure everything was on track and ready to be delivered by the handover date.
